

AiraHybrid™ Odor Control System

The AiraHybrid treatment system is a multi-stage process, designed to combine technologies and achieve greater overall odor removal. The biological and/or adsorption technologies chosen are based on your specific application and treatment objectives.

Advantages

- Total odor removal
- Customizable to your application
- Cost-effective designs
- Long-life media(s)
- Proven technologies
- Environmentally friendly media(s)
- Lower O&M costs
- Modular systems available between 150 CFM & 5,000 CFM
- Pre-packaged, skid-mounted systems available

Available Technologies

- Biotrickling filter for H₂S removal
- Biofilter for total odor treatment, VOC removal
- Activated carbon for polishing

10,000 CFM Installation

Foamed Glass Media

Quahog Shell Media

Activated Carbon Media
